ACSS attended (July to March)

1731 candidates, 1052 attended ACSS

Acceptance Rate for Those Who Attended ACSS: 32.13%
Acceptance Rate for Those Who Did Not Attend ACSS: 11.91%

Using Chi-Square Statistic to see whether ACSS affects acceptance chances:

- If p-value < 0.05 , it means the difference in acceptance rates is not random—attending ACSS likely increases acceptance chances.
- If p-value ≥ 0.05 , it means no strong evidence that ACSS affects acceptance.

Chi-Square Statistic: 402.41

P-Value: 0.0000

The difference is statistically significant. Attending ACSS likely affects acceptance chances.

Using Odds ratio to find the odds of acceptance

- If odds ratio > 1 , attending ACSS improves acceptance chances.
- If odds ratio < 1 , attending ACSS decreases acceptance chances.

Odds Ratio: 1.09

Attending ACSS increases the odds of acceptance.

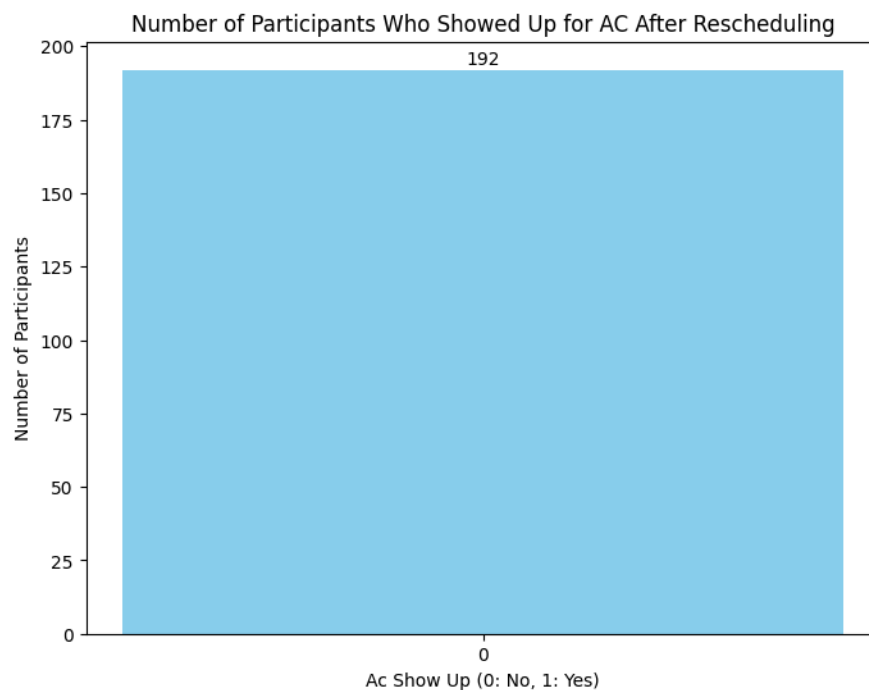

Using Posterior Probability

- If posterior ratio > 1 , ACSS increases acceptance probability.
- If posterior ratio ≈ 1 , ACSS has no strong effect.

Posterior Probability of Acceptance Given Attendance: 2.70

Attending ACSS increases the probability of being accepted.
